a.g.finiware.com/SiteTools/database_for_ie11_ .Hemorrhagic stroke resulting from cerebral amyloid angiopathy in a dog. Cerebrovascular disease is uncommon in companion animals and the condition can be difficult to diagnose in small dogs. Amyloid angiopathy was identified as a cause of cerebral amyloidosis in a 16-year-old, intact female, spayed, Maltese terrier.

On physical examination, the dog was apyretic, hydrated, and in respiratory distress. The right side of the face was pale with conjunctival injection. The dog was hyperdynamic, tachycardic, hypotensive, and respiratory acidotic. A wide-based left hemiparesis and seizure activity were identified. Seizure activity progressed despite anticonvulsant therapy. The most striking cerebrovascular changes were multiple hemorrhages affecting multiple parts of the brain.

Histologic examination of a section of brain containing the hemorrhage revealed old and new microhemorrhages and platelet

Adipose tissue macrophages: new players in the glomerular disease process. Adipose tissue macrophages (ATMs) are important regulators of adipogenesis, energy balance, insulin sensitivity, glucose homeostasis, and the cardiovascular system. They play a crucial role in metabolic dysfunction, obesity, and cardiovascular disease, a major cause of morbidity and mortality in the world. ATMs in the context of obesity are characterized by unique phenotypes. They express a distinct profile of proinflammatory and anti-inflammatory factors, which are present in high or low concentrations, respectively. ATMs are a new source of proinflammatory mediators, such as tumor necrosis factor- α , interleukin-1 β , interleukin-6, monocyte chemoattractant protein-1, and matrix metalloproteinase-9.

Moreover, ATMs secrete cholesterol-carrying foam cells, which increase the risk of atherosclerosis. These cells are also found around blood vessels, where they are termed vascular wall macrophages. Emerging evidence suggests that ATMs may also play an important role in nephrogenesis, renal inflammation, and renal fibrosis, key components of the progression of diabetic nephropathy. ATMs are a major target in diabetes and have been implicated in its progression. Targeting and suppressing ATMs may be a novel treatment approach against the microvascular and macrovascular complications of diabetes.
